

Millions of websites use pop-ups as an essential part of their design. So too do many advertisers, and for this reason various software developers have written blockers into their programmes. This can be equally as annoying as the adverts they are seeking to stop!

Here are a few tips to overcome the blockers in order to allow you to see the pop-ups you choose to see. Remember that if you disable a blocker in one place i.e. Internet Explorer, you may also have to do it again in Google or AOL etc.
